

Unisenza UFH Controls System

The Unisenza UFH Controls System provides a comprehensive solution for radiant heating and cooling, featuring advanced thermostats (electronic dial, digital, and WiFi), a versatile wiring centre, and efficient thermal actuators. The system operates on both 230V and 24V configurations, employing a noiseless Triac output for efficient temperature regulation within a range of 5–30°C. LED indicators display system status, while the WiFi thermostat offers app control for remote operation. The system supports multiple installations, making it ideal for new projects and retrofits. It ensures minimal energy use, aligning with sustainable climate comfort goals. An extended 5-year warranty covers all Unisenza products, ensuring reliability and peace of mind.
