

TRV2

The Myson TRV2 thermostatic radiator valve is engineered for modern central heating systems, offering a liquid sensor for precise temperature control. It supports compression and push fit connections, available in both straight and angled designs. The valve operates at a maximum pressure of 10 bar (compression) and 3 bar (pushfit), with operating temperatures up to 120°C (compression) and 92°C (pushfit). Certified under ISO 9001:2008 and conforming to BS 2767-10 and EN 215 standards, the TRV2 comes with a 2-year guarantee against manufacturing defects, ensuring reliable performance and ease of installation. Finished in chrome.
